The mostly were child between 2- 5 year (84.6%). Since 2017, the event of Outbreak were 19 times, often were in Child Development Center, spread over the area in Yasothon province.

Picture 1 : Area map shows morbidity rate, Mueang and Kud-Chum district (red zone) were highest morbidity rate area while Kho-wang district was lowest morbidity rate (green zone)

**Picture 1** Area map of morbidity rate of Cases of Hand, foot and mouth disease in Yasothon Province, 2017

**Picture 2** Number of Cases of Hand, foot and mouth disease in Yasothon Province, 2017

Picture 2 : The graph shows information of trend of Hand, foot and mouth disease in 2017 compare with median (2011-2016). According to the information, The number of cases in 2017 were always higher levels than medians. Data of 2017 In January, number of cases were high than other month and continued to decrease until to March. Expect, During May to July the number of cases of 2017 will be higher trend according medians. Clearly, in 2017 Hand, foot and mouth disease was important problem which sometime may be the outbreak. So, should consider for prevention and control disease before seasonal of the outbreak in Child Development Center
